BEGINNER
5KM TRAINING PROGRAM

ABOUT THE **BEGINNER** 5KM TRAINING PROGRAM

This program has been designed for those new to running or those who haven't run for a long time. It is an introductory program to ensure you are safely able to complete the 5km distance.

TRAINING TERMS

EASY

This level of effort should largely feel easy aerobically but wont always be easy. For example a 10min run at an easy pace vs your first 90min run at easy pace. The pace will be the same however, due to the increase in duration, it will likely not feel easy towards the end until you adapt to the increase. But a good simple test to tell you are in the easy/aerobic zone is the talk test. You should be able to have a conversation. If you cant, you are probably going too hard.

SOLID

This level of effort is a touch harder than easy. It's more of a tempo effort. A simple test would be you should be able to chat but not at the same level as Easy/aerobic. For example you might be able to have a conversation but it would be very difficult to maintain or would be broken so you could catch your breath.

HARD

This level of effort should be difficult and uncomfortable to sustain. You wont feel like talking and if you tried it would only be a few words as you should be breathing quite heavily.

RECOVERY IS TRAINING

THE IMPORTANCE OF RECOVERY

The only training you benefit from is the training you recover from.

It's true that pushing your limits makes you perform better. But the closer you get to the edge, the higher the risk of injury or illness. That's why recovery is so important.

The better you recover, the better you can train. And ultimately, the better you will perform.

Recovery days are scheduled during the week. If this exact schedule doesn't suit your weekly schedule make sure you are scheduling rest and recovery days in between harder efforts to ensure you adapt and recover.
